

Project Executable Files

Date	14th July 2026
Team ID	
Project Name	Smart Lender
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	yes
2	README / Setup Guide (instructions to run the project)	yes
3	requirements.txt / package.json / dependency file	yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	yes
6	Deployed application URL (if hosted)	yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	No
10	Demo video or walkthrough (if required)	yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```

Smart-Lender/
|
├─ app/
|   ├── app.py           # Main Flask application
|   ├── config.py        # Configuration settings
|   └─ predictor.py       # Loan prediction logic
|
├─ static/
|   ├── css/             # Stylesheets
|   ├── js/              # JavaScript files
|   └─ images/           # Images and assets
|
├─ templates/
|   ├── base.html
|   ├── index.html
|   ├── predict.html
|   ├── result.html
|   ├── about.html
|   ├── contact.html
|   ├── error.html
|   └─ 404.html
|
├─ data/
|   └─ loan_prediction.csv # Training dataset
|
├─ models/
|   └─ model_metadata.json # Model information
|
├─ notebooks/
|   └─ Smart_Lender.ipynb  # Model training notebook
|
├─ Procfile              # Render deployment
├─ render.yaml           # Render configuration
├─ requirements.txt       # Python dependencies
├─ runtime.txt            # Python runtime version
└─ README.md             # Project documentation
  
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://smart-lender-ai.onrender.com/
Login Credentials (Demo)	No user name and password required
Platform / Hosting Provider	Render
Repository Link	https://github.com/Sanjuu887/Smart-Lender
Demo Video Link	Drive video link

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

- Python 3.11 or above
- Git
- Visual Studio Code (Recommended)

Step 1: Clone the repository : `git clone https://github.com/Sanjuu887/SMART-LENDER.git`

Step 2: Navigate to the project folder : `cd SMART-LENDER`

Step 3: Create and activate a virtual environment

Windows:

```
python -m venv .venv
.venv\Scripts\activate
```

Step 4: Install the required dependencies : `pip install -r requirements.txt`

Step 5: Run the application: `python app/app.py`

Step 6: Open the application : Open your browser and visit:

<http://127.0.0.1:5000>

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	The prediction accuracy depends on the quality and size of the training dataset.	The model can be improved by training with a larger and more diverse dataset.
2	The application predicts loan approval based only on the selected input features and does not use real-time banking or credit score APIs.	Future versions can integrate real-time financial data and credit score services for better predictions.
3	The application is designed for educational and demonstration purposes and should not be used as the sole basis for real financial decisions.	The system should be used as a decision-support tool alongside manual verification by financial institutions.
